UNREAL ENGINE / GAMEPLAY / APPLIED ML

Alexander Stankov

Unreal Engine Gameplay Developer | Solo Developer | ML Background

I don't just build prototypes. I've shipped a game on Steam.

MOSCOW, RUSSIA • INDEPENDENT DEVELOPMENT SINCE 2022

TECHNICAL SKILLS

UNREAL ENGINE
UE5, Blueprints, UMG, Animation Blueprints, Niagara, gameplay systems, AI, physics, vehicles

ML & COMPUTER VISION
Python, PyTorch, YOLOv8, object detection, computer vision

TOOLS
Git, Visual Studio, Adobe Photoshop, Paint Tool SAI

C++ - currently learning

LANGUAGES

Russian - Native
English - C1

EDUCATION

MIREA
Russian Technological University
BSc in Machine Learning
2022-2026

LINKS

Steam - Hazardous Island

Portfolio

PROFILE

Unreal Engine developer building games hands-on since 2022. Solo-developed and shipped **Hazardous Island** on Steam. Strong focus on Blueprint architecture, gameplay systems, AI, UI, vehicles, physics and practical problem-solving. Bachelor's degree in Machine Learning (MIREA), with experience in Python, PyTorch, YOLOv8 and computer vision.

EXPERIENCE

Independent Unreal Engine Developer | Self-employed | 2022-Present

Independent end-to-end game development: technical problem-solving, gameplay architecture, implementation and delivery through release.

SELECTED PROJECTS

HAZARDOUS ISLAND | RELEASED ON STEAM

- Solo-developed and released a complete open-world FPS.
- Designed Blueprint gameplay architecture and implemented mechanics, AI, UI, vehicle systems and interactive features.
- Owned the project from development through release on Steam.

INTERACTIVE 2D UMG PROTOTYPE

- Built an interactive 2D prototype entirely in Widget Blueprints, using an alternative technical approach to work around sprite-rendering limitations.

BOMBER GUYS | 2D CO-OP CONCEPT

- Designed a 1-4 player pixel-art co-op game concept around resource gathering, town development, level progression, enemies and bosses.

ML & COMPUTER VISION

- Worked on computer-vision and object-detection tasks with YOLOv8, using Python and PyTorch in ML studies/projects.

My case is simple: I can show you a shipped game, not just a list of technologies on a CV.
